Large Model Safety Workshop 2026

Date

Early, December, 2026

Location

Singapore

Expected Participants

250+

Introduction

In the rapidly advancing era of artificial intelligence, large models and their applications, including AI agents and embodied AI systems, are transforming how machines perceive, reason, and interact with the world, unlocking unprecedented capabilities across diverse domains. However, these breakthroughs also introduce growing challenges in safety, reliability, robustness, and ethical responsibility, making large model safety a critical priority for the AI community. The Large Model Safety Workshop 2026 brings together researchers, practitioners, and industry leaders to explore emerging threats, system-level vulnerabilities, and effective risk mitigation strategies across models, agents, and embodied intelligence, through expert talks, technical presentations, and interactive discussions. This workshop offers a unique platform to advance trustworthy, secure, and responsible AI in the age of large-scale intelligent technologies.
